BALTIMORE'S CHRISTIAN CONNECTION
AM 1570

July 15, 1987

Mr. Bill Burrows
709 Division Street
Gloucester City, New Jersey 08030-2337

Dear Mr. Burrows:

This letter is to confirm your "DX" reception of AM Radio Station WFEL, Towson, Maryland from 1336-1340 hours Eastern Standard Time on December 29, 1986. It is understandable that your signal report was weak in New Jersey since there are quite a few operators on 1570 KHz during the daylight hours on the east coast including several in the Pennsylvania area.

WFEL operates with unlimited hours on 1570 KHz using a 283' (essentially half-wave) single uniform cross-section guyed (non-directional) antenna located on Hart Road in Towson, Maryland. During daylight hours (sunrise to sunset) 5,000 watts of RF energy is delivered to our antenna and at night we operate at 236 watts courtesy of the recently-enacted "Mexican Agreement". An application has been filed with the FCC to upgrade our night power to 500 watts, non-directional. Currently we operate from 6AM to sunrise with a pre-sunrise authorization of 400 watts.

WFEL is authorized for 24 hour operation however, we currently sign-off at 12 midnight and return to the air at 6 AM. Our general coverage area is considered to be metropolitan Baltimore, Maryland and our studios are co-located at our transmitter site in Towson. Our general format is considered to be contemporary religous program offerings including pre-recorded programs and a substantial amount of music from the standard broadcast sources (tape, records, etc.).

At WFEL DX reports are considered to be very important to us and we appreciate your response and hope you will continue to listen to us when conditions permit.

Sincerely,

Dwight J. Weller
Technical Advisor
